

## STEP 6: CABLE GUARD ADJUSTMENT

The purpose of the cable guard is to hold the cables out of the path of the arrow. As a final check, make sure that the cable guard is adjusted outward just enough to allow arrow vane clearance. The cable guard should be in approximately the 1 o'clock position as shown in the illustration. Excess outward adjustment will cause premature cable and string wear and may cause the cables to track incorrectly on the wheels and cause serious personal injury and damage to the bow.

## ARCHERY RESEARCH WARRANTY

Your Archery Research bow carries the best warranty in the archery industry. It is a Limited Lifetime Warranty to the original owner for the life of the bow. The bow will be replaced or repaired to restore its original performance at the discretion of Archery Research. Cable, string and other wearable items are not covered by this warranty. Any evidence of misuse, abuse or alteration of the bow voids any claim to warranty. The cable and string on the bow must be changed every 5,000 shots or every 12 months in order for this warranty to be in force. Arrow weight must never be less than the weight specified on the label located on the lower limb of the bow. Doing so will void your warranty.

CUT ON DOTTED LINE, FILL OUT AND RETURN WITHIN 30 DAYS.
